So, what is Invisalign?

If you dream of a straighter smile but don't want to go through traditional orthodontic treatment, Invisalign may be the option for you.

Invisalign clear aligners are the braces of the future – they straighten your teeth without the hefty wires traditional braces use. With Invisalign being virtually invisible – hence the name – it is often a top choice of treatment when teens, adults and professionals dream of aligning their teeth.

The Invisalign treatment includes a series of custom-made clear aligners made for you and your unique smile. These are clear plastic trays which apply gentle pressure to slowly move your teeth. During your treatment, you will wear each set of aligners for about two weeks before you switch to the next set. This process will gradually shift your teeth a little closer each time to the position that your dentist has planned – meaning your compliance is imperative.

How does the Invisalign system work?

Step 1

Firstly, your Invisalign-trained dentist will take photos, X-rays, and digital scans or a digital impression to help create your new treatment plan.

Step 2

The Invisalign laboratory will then use these records along with the treatment prescribed by your dentist to create a personalised 3D treatment plan – just for you!

You will be able to see the final position expected of your teeth alignment and estimate the likely length of your treatment

Step 3

Your brand new custom aligners will be shipped to Dr Anthony Spink and his dental suite.

Step 4

Your first series of aligners are given to you – typically 3-4 sets at a time. You will wear these every day and change them at home every two weeks.

Step 5

You will need to visit your dentist approximately every 6-8 weeks. At these times, your treatment progress will be monitored, and you will receive your next series of aligners.

Step 6

After you have completed your Invisalign treatment, you should wear a retainer to assist in maintaining the position of your new alignment.

Concerns with Invisalign?

DENTAL SUITE

Can I eat with my aligners in?

The Invisalign aligners are extremely easy to put in place and remove. Meaning you can eat the same foods as before treatment – unlike traditional braces.

Will the Invisalign treatment hurt?

Most patients may feel pressure in the early stage when starting with the first few Invisalign aligners. However, Invisalign is known to generate less pain than traditional braces.

Can I drink coffee, tea or other staining beverages?

Your aligners can easily be taken out; this eases the process of maintaining the correct oral hygiene after drinking beverages that could stain your teeth.

Will Invisalign affect my speech?

Like all orthodontic appliances, it can be difficult to get used to the appliance. Once you are used to the aligners, your speech should not be affected.

What are the biggest advantages of Invisalign treatment?

Anthony Spink
DENTAL SUITE

Invisalign treatment is virtually invisible meaning patients can wear this treatment all day.

Maintain good oral health as you can remove your aligners to brush, floss and rinse the same way you usually would.

Event coming up? No problem, simply remove your aligners for the event and back in when the event is over.

You don't have to worry about Invisalign interfering with your active lifestyle as it is more comfortable than traditional braces.

Usually, patients see their orthodontist less with Invisalign over traditional braces, meaning this treatment is great for patients with busy lives.

Can my teeth be straightened with Invisalign?

To achieve the best results, the perfect candidate for Invisalign treatment shouldn't have large malocclusions or teeth that are rounded, rotated or need vertical movement. If your dentist or orthodontist has mentioned these apply to you, you may need alternative brace options.

The below images show perfect candidates for Invisalign treatment.

Overcrowded teeth

This occurs when there is a lack of room within your jaw for all of your teeth to fit normally.

Overbite

This occurs when the upper teeth bite over the lower teeth.

Widely spaced teeth

Widely spaced teeth
The opposite of overcrowded teeth, widely spaced teeth occur when you have extra space within your jaw due to small-sized teeth, abnormal growth of the jawbones, genetics, missing teeth, and/or tongue protrusion.

Underbite

The opposite of overbite, underbite occurs when the lower teeth protrude past the upper front teeth.

Crossbite

This occurs when the upper and lower jaws are misaligned.

Why choose Dr Anthony Spink for your Invisalign treatment?

At Anthony Spink Dental Suite, our focus is on YOU and how we can help you achieve your very best smile. By using high-quality, advanced treatments combined with superior levels of care, we can ensure your treatment is conducted to the highest degree.

It is never too late to straighten your smile and at Anthony Spink Dental Suite, we aim to have Invisalign create the smile you deserve.

Dr Anthony Spink has been running his own practice since 2000. Dr Spink and his team believe that healthy smiles do not come about by accident, and they are committed to educating their patients on the preventive aspects of dentistry and to providing the best possible treatment for any dental conditions and concerns their patients may have.

Dr Spink has a keen interest in improving the alignments of each of his patients' smiles, and he stands by Invisalign because of the feedback he has received from the many happy patients he has had over the years.
